StarLeaf

hello world

StarLeaf Call for video calling and conferencing

StarLeaf Call is the most cost-effective way for you to deploy, use and pay for video calling and conferencing. Whether you need to equip one conference room or tens of thousands of connected users, you will enjoy the high performance and reliability of an on-demand, cloud-based solution that is as far reaching as the telephone and just as easy-to-use.

Meet anyone, anywhere, anytime

StarLeaf Call offers universal connectivity allowing you to hold or join meetings anytime. It provides secure calling to StarLeaf Group or Personal Telepresence systems, as well as to any standards-based video system, whether hardware or software. And the Guest Invite feature enables you to ask anyone to join you on a video call or conference, for free, directly from their PC, Mac or iPad.

Unmatched ease-of-use

StarLeaf's user interface requires no training, features step-by-step guidance and is common across all hardware and software endpoints.

Deploy anywhere in minutes with QuickConnect

There is no need for IT support – StarLeaf Breeze software is downloaded and installed for free, and all StarLeaf hardware endpoints are plug and play.

With StarLeaf Call, you take delivery of an endpoint, anywhere in the world, plug it into the network and enter a 12-digit identification code. This QuickConnect code verifies the account, automatically configures the endpoint, populates the corporate directory and provides the connection to StarLeaf Call. Within minutes you are ready to video call or conference anyone.

StarLeaf Call portal keeps you in control

Ongoing management is made simple and is conducted via the StarLeaf Call portal – a browser-based tool that keeps your admin in control of all adds, changes and deletions from the service.

StarLeaf Call Features and Benefits

- ▶ Call anyone anywhere on any StarLeaf Telepresence system or standards-based device

- ▶ No on-premise infrastructure

- ▶ Endpoints for rooms, desktops, PCs, Macs and iPads

- ▶ Assured video call quality

- ▶ Multiparty conferencing, dial-out or meet-me for groups of up to 17

- ▶ Meet anyone with Guest Invite

- ▶ Screen sharing and video conferencing simultaneously

- ▶ Rich functionality including:
  - ▶ call transfer
  - ▶ forward
  - ▶ hunt groups
  - ▶ videomail
  - ▶ call history

- ▶ QuickConnect plug and play anywhere in the world

- ▶ Easy provisioning and management

- ▶ Secure with all calls authenticated and encrypted

- ▶ Failsafe with full redundancy and multiple data centers

- ▶ Total interoperability with all existing video (H.323/SIP)

- ▶ Access support services 24x7

Quality and reliability you can trust in

StarLeaf Call is a high performing, reliable video calling and conferencing environment that ensures you receive the maximum quality, no matter where in the world you are. It automatically tests bandwidth before every connection, and through technological advances, guards against packet-loss and latency.

All data centers benefit from system redundancy ensuring StarLeaf Call is fail-safe. With failover to standby servers occurring in the event of any abnormal outages or component failure, you are assured of high-reliability and constant service provision.

Furthermore, StarLeaf has multiple data centers worldwide and it is possible for all users to be moved between them as required, thereby protecting against any catastrophic local events that prevent access to a whole data center.

With signaling and media fully encrypted for all calls, you are guaranteed that your voice and video communications are completely secure and safe from unwanted prying eyes. In addition, and because all calls traverse the Internet, there is no drain on, or need to increase dedicated network bandwidth between your locations, which makes bringing video into mainstream communications easy, secure and economical.

Economical to buy and use

StarLeaf Call is delivered on an annual fee basis. StarLeaf hardware endpoints have an upfront cost, and each requires a dedicated connection to StarLeaf Call. The dedicated access fee applies to all hardware endpoints and ensures that the endpoint is always-on and ready to make and receive calls 24x7. In addition, StarLeaf offers concurrent usage licenses, which can be purchased to increase the conferencing capacity of any StarLeaf deployment. StarLeaf Breeze is free for all customers with a StarLeaf Call concurrent usage package. Each concurrent usage license entitles up to 20 individuals to use StarLeaf Breeze on any, or all, of their PCs, and iPads. Now you can make video calling and conferencing available to everyone across your organization without installation fees.
